Electronic Systems Technician **Basic** Residential Boot Camp

Acquire the fundamental knowledge and skills necessary to get started in the residential electronic systems industry. Many CEDIA professionals began their careers in Electronic Systems Technician Basic Residential Boot Camp and then used the skills they learned to build a foundation for a successful career as a technician, designer or even business owner. Updated to address the most current trends and standards in residential infrastructure, this popular training session is more intense than ever.

CEDIA Boot Camp attendees gain a lot from the training. Here's what a few have had to say about it:

"I was brand new to installation. CEDIA Boot Camp gave me a really great introduction to the installation muscle work, and a reasonable overview of design and documentation."

- '09 Alumni

"CEDIA Boot Camp helped me to become more attractive for hire."

- '09 Alumni

This comprehensive three-day session includes classroom time as well as extensive hands-on lab training in real rooms, using real tools, products and test equipment.

The combination of classroom time and hands-on lab training allows students the chance to perform typical installation tasks in a real jobsite environment.

CEDIA Certified Instructors help guide participants through a full overview of residential infrastructure and installation including:

- Communication cabling concepts
- Codes and standards
- Jobsite safety
- Cable and sub-system testing
- Speaker installation
- Retro-fit techniques and tools

Do not miss this opportunity to get the perfect combination of classroom study and hands-on lab time. Learn the fundamentals the right way.

CEDIA EST Basic Residential Boot Camps are held at CEDIA Headquarters in Indianapolis, IN and at the d.a.v.i.d, LLC Group Training Facility in Westbury, NY.

Electronic Systems Technician Home Theater Boot Camp

Take your home theater installations to the next level with Electronic Systems Technician Home Theater Boot Camp. This intense three-day training session provides the knowledge and confidence to properly install a home theater system, including the added value of system calibration and acoustical treatment options. Learning how to master these skills will raise the quality of every project your company does, help distinguish your business from the competition and add to your bottom line.

The goal of this specialized training is to provide the knowledge and skills necessary to properly install, setup, and calibrate a typical home theater or media room system.

Topics covered in Electronic Systems Technician Home Theater Boot Camp include:

- Audio and video signals, components, and interconnects
- Room acoustics, acoustical treatment, and sound transmission
- Professional rack configuration and thermal management
- Proper documentation and installation labeling
- Installation of projectors, flat panel displays, and loudspeakers
- Audio and video calibration

See what past attendees had to say about CEDIA Boot Camp:

“With CEDIA Boot Camp I was able to apply my new skills right away.”

- '09 Alumni

“The highlight of my boot camp experience was the interaction between both staff and students.”

- '09 Alumni

If you are ready to take your skill set to the next level and offer quality professional installations, attend CEDIA's Electronic Systems Technician Home Theater Boot Camp (formerly Advanced EST Boot Camp).

The EST Home Theater Boot Camps are held at CEDIA Headquarters in Indianapolis, IN.
