

ESDOL122 – Introduction to Sub-System Design

This course is designed to educate electronic industry personnel on sub-system fundamentals, such as terms, interface/control basics, and networking. The course examines sub-system components and the integration of lighting security, HVAC, and audio/video entertainment systems.

Course Objectives:

- Describe the basic functions of various sub-systems
- Discuss the merits of integrating sub-systems such as HVAC, entertainment, security, and lighting
- Identify potential challenges in sub-system connectivity

Recommended prerequisites:

EST202 Introduction to Sub-Systems
