

ESDOL131 – Fundamentals of Home Theater Design

This course is designed to educate industry personnel on the basic terms, elements and requirements of home theater design. This course examines the differences between custom-designed home theaters and retail installations. It also traces the exciting progression from Mono to 7.1 and its impact on our industry. The course provides up-to-date information on networking requirements and user-friendly interfaces.

Course Objectives:

- Describe the technology used in custom home theater
- Identify critical design elements in custom home theater
- Examine the evolution from mono to multi-channel surround sound
- List the key elements of a user friendly interface
- Define pre-wiring requirement for custom home theaters

Recommended Prerequisite:

EST206 Basic Multi-Channel AV Layout
