

## **ESDOL142 – Introduction to Digital Media Servers**

This course is designed to educate industry personnel on digital media fundamentals such as how the hardware, software, and technology of media servers work; the common recording formats; and the legal issues for digital rights management. This course also includes information and examples of how to select and install a media server that meets client needs and budgets.

Topics include:

- Basic digital media server technology and the benefits and drawbacks of server use
- Hardware and software requirements for media servers
- Common recording formats for digital media
- Legal issues surrounding digital rights management

Recommended Prerequisites:

EST310 PC Application Management and Configuration

EST313 / ESTOL313 Principles of IP Networking

ESD141 Introduction to Electronic Home Entertainment
