

ESTOL305 – Audio Set-Up and Calibration

This course is designed to teach technicians how to verify audio functions in a home theater system. It also describes the proper procedure to calibrate audio equipment in a home theater system. Interactive simulations in this online course provide a “hands-on” experience for the student.

Course Objectives:

- Explain how a good audio system should be designed
- List sound practices for system connections
- Verifying a home theater audio system
- Calibrate a home theater audio system

Recommended Prerequisites:

EST201 Electrical and Electronic Application

EST203 Electrical and Electronic Test Equipment
