

ESTOL312 - Component Installation

This course is designed to instruct technicians how to install audio and video components in a way that considers rack and panel selection, the choice of lifts and brackets, and room aesthetics. The course also teaches mounting, weight distribution, active and passive ventilation, and wiring.

Course Objectives:

- Evaluate the benefits and drawbacks of essential components of racks and cabinets used in a variety of settings
- Discuss how to develop an installation project that includes head end location, cable placement, and ventilation requirements
- Evaluate and specify specific display types, mounting options, and appropriate standards
- Summarize essential elements of work-site management

Recommended prerequisites:

EST206 Basic Multi-Channel A/V Layout
